

ScratchC{ }de Technologies

{ WE MAKE IT POSSIBLE }

INTRODUCTION

Scratchcode brings ideas to life by capitalizing on its core competency in software product development. Scratchcode's focused expertise and approach is designed to help you by converting your ideas to real life products.

Scratchcode technologies focuses on bringing together innovation, domain knowledge, technology strengths and an excellent team to deliver quality software which enables customers to run their business with maximum efficiency.

Scratchcode's core specialization is in enterprise applications. Scratchcode's team of technologists comprises software architects, engineers, localization consultants and domain experts. Scratchcode's simultaneously emphasizes technical expertise, domain knowledge and soft skills and has a highly trained talent pool that stays focused on the cutting edge of software trends..

WE HAVE CORE COMPETENCIES IN A NUMBER OF AREAS, INCLUDING:

- ◆ Microsoft asp.net application development
- ◆ Application migrations solutions
- ◆ Database migration
- ◆ Web portal solutions
- ◆ E-commerce solutions
- ◆ PHP application development

WE HAVE IDENTIFIED FEW AREAS WHERE WE COULD ADD VALUE:

- ◆ Design and development of cost effective enterprise-level web applications
- ◆ Creating custom applications on .net platform
- ◆ Creating new business application from scratch
- ◆ Migration of current application to .net platform
Expertise in database like MYSQL, MS-SQL server 2008 and above

CARGO MANAGEMENT SYSTEM

This is a robust application designed to meet the end-to-end needs of freight forwarders of all sizes. The solution provides accurate and real-time information, which can be shared between freight forwarders and other parties involved in the movement of freight. This helps forwarders to focus and solve their business challenges at operational and strategic levels. This is a web-based software where customers can quickly get an overview of the available transport solutions, make a selection matching their specific requirements, make a selection matching their specific requirements, and instantly book the services. It aims to improve the buying experience for businesses looking for transportation solutions, focusing on many parameters, such as timing, transit time and complete price. Web based freight management software gives you visibility and control over your freight movements, performance and costs to rapidly deliver you savings.

BENEFITS

- ◆ Increased accuracy
- ◆ Improved visibility to your shipments
- ◆ Improved services to your customers
- ◆ Increased productivity that will grow your business
- ◆ Improved customer communications
- ◆ Automation in the process of logistics/transportation
- ◆ Real-time freight rates
- ◆ Simplifies data entry and the elimination of many manual steps

FEATURES

- ◆ User friendly interface
- ◆ Easy to search, compare and book your shipment
- ◆ User-defined rules for stock movement
- ◆ Multi-modal freight operations (Sea, Road, Rail, Air)
- ◆ Agency management (liner and ships husbandry)
- ◆ Inter system communications (no more retyping)
- ◆ Multi-currency
- ◆ Generate online invoice
- ◆ Rates and tariffs management
- ◆ Customizable reports
- ◆ Receive online booking requests
