

ScratchC{ }de Technologies

{ WE MAKE IT POSSIBLE }

# INTRODUCTION

Scratchcode brings ideas to life by capitalizing on its core competency in software product development. Scratchcode's focused expertise and approach is designed to help you by converting your ideas to real life products.

Scratchcode technologies focuses on bringing together innovation, domain knowledge, technology strengths and an excellent team to deliver quality software which enables customers to run their business with maximum efficiency.

Scratchcode's core specialization is in enterprise applications. Scratchcode's team of technologists comprises software architects, engineers, localization consultants and domain experts. Scratchcode's simultaneously emphasizes technical expertise, domain knowledge and soft skills and has a highly trained talent pool that stays focused on the cutting edge of software trends..

## WE HAVE CORE COMPETENCIES IN A NUMBER OF AREAS, INCLUDING:

- ◆ Microsoft asp.net application development
- ◆ Application migrations solutions
- ◆ Database migration
- ◆ Web portal solutions
- ◆ E-commerce solutions
- ◆ PHP application development

## WE HAVE IDENTIFIED FEW AREAS WHERE WE COULD ADD VALUE:

- ◆ Design and development of cost effective enterprise-level web applications
- ◆ Creating custom applications on .net platform
- ◆ Creating new business application from scratch
- ◆ Migration of current application to .net platform  
Expertise in database like MYSQL, MS-SQL server 2008 and above

# WAREHOUSE MANAGEMENT SYSTEM

Alpha warehouse management system (WMS) is a software application that supports the day-to-day operations in a warehouse. WMS programs enable centralized management of tasks such as tracking inventory levels and stock locations. Warehouse management systems (WMS) are increasingly becoming a technology that distributors and manufacturers rely on to automate warehouse movements in order to track inventory better including enhancements in performing a unified and efficient method for the proper flow on inventory.

Alpha warehouse management system is used to control and track the transfer and storage of materials in a warehouse. The system involves a number of processes that are important when shipping, receiving, or even putting away materials and integrates with other systems in the supply chain to ensure data transparency throughout your enterprise.

## BENEFITS

- ◆ Users can access the system very easily from anywhere
- ◆ Effective management control
- ◆ Zero information errors
- ◆ Improved capacity
- ◆ Maximum space utilization and maximum labor productivity
- ◆ Optimized processes
- ◆ Reduced operational expenses
- ◆ Transparency and visibility
- ◆ Better balanced inventory

## FEATURES

- ◆ User friendly web interface for accessing
- ◆ Easy tracking of goods
- ◆ User-defined rules for stock movement
- ◆ User-defined parameters for items and locations to control stock movement
- ◆ Fixed and random locations for more efficient stock movement
- ◆ Automatic shipping carton selection during picking
- ◆ Search with product code or product name
- ◆ Manual or automatic storage, picking, and replenishment of stock
- ◆ Audit trail reporting of inventory movement
- ◆ Reports
- ◆ Multiple warehouses can manage in one system
- ◆ Available in cloud (SaaS) platform also
- ◆ Inventory accuracy
